Professional Summary

Final-year Computer Science undergraduate (VIT Bhopal) building full-stack, API-driven applications with React.js, Node.js, FastAPI, and Java. Shipped a security monitoring dashboard that cut threat identification time by 30% and an AI summarization platform that compresses documents by up to 70%, both with secure JWT-based authentication. Strong foundation in Data Structures & Algorithms, OOP, and relational databases. Seeking a Full-Stack Software Developer role to build scalable, secure software.

Technical Skills

Languages: Java, Python, JavaScript (ES6+), SQL, HTML5, CSS3
Frontend: React.js, jQuery, Bootstrap, Tailwind CSS
Backend: Node.js, Express.js, EJS, FastAPI, JDBC, REST API Design
Databases: PostgreSQL, MySQL
Auth & Security: JWT
Core CS: Data Structures & Algorithms, Object-Oriented Programming
Tools & Platforms: Git, GitHub

Projects

Web Trust Analyzer – Real-Time Security Monitoring Dashboard

React.js, JavaScript, REST APIs | GitHub

- Architected the React.js frontend for a Web Application Firewall platform, integrating a Go backend's REST APIs to surface live threat activity in real time.
- Designed interactive dashboards for attack statistics, severity levels, and threat-type breakdowns, cutting threat-identification time by around 30%.
- Delivered a multi-view interface for threat monitoring, OWASP compliance, and firewall configuration, reducing manual setup work by roughly 25%.
- Optimized API integration to keep dashboards refreshing in near real time across 5+ views with zero stale data.
- Led frontend architecture within a 4-person cross-functional team, coordinating closely with backend developers on Go and SQLite.
- Engineered a reusable React component library that sped up new feature development by roughly 20%.

SummarAI – AI-Powered Full-Stack Text Summarization App

React, FastAPI, Python, SQLite | GitHub

- Built a full-stack text summarization app with React 19 and FastAPI, applying DistilBART (sshleifer/distilbart-cnn-12-6) to compress documents by up to 70% without losing key points.
- Implemented drag-and-drop uploads for PDF, DOCX, and TXT files with 4 summary styles and 3 length options, cutting user reading time by roughly 60%.
- Secured the platform with JWT-based authentication, bcrypt password hashing, and a SQLite backend for accounts, history, search, and favorites.
- Integrated YAKE keyword extraction with click-to-highlight and automatic key-point detection, improving summary scannability for end users.
- Streamlined the workflow end-to-end with reading-time and compression-ratio metrics plus one-click PDF export.
- Structured the SQLite schema to keep user history and favorites fast to query at scale, even as requests grew into the hundreds.

Education

Vellore Institute of Technology – Bhopal, Madhya Pradesh
B.Tech in Computer Science, CGPA: 7.82/10.0

2023 – 2027

Certifications

- Google IT Support Certificate – Google Career Certificates (Jan 2026) | Verify
- The Bits and Bytes of Computer Networking – Google, Coursera (Dec 2025) | Verify
