Professional Summary

Final-year Computer Science undergraduate (VIT Bhopal) building scalable, high-performance full-stack applications with React.js, Node.js, Express.js, FastAPI, and Java. Engineered a real-time API load testing platform with custom promise-based concurrency control and live telemetry, alongside an AI summarization platform compressing documents by up to 70%. Strong foundation in Data Structures & Algorithms, Asynchronous Systems, OOP, and relational databases. Seeking a Full-Stack Software Developer role.

Technical Skills

Languages: Java, JavaScript (ES6+), SQL, HTML5, CSS3
Frontend: React.js
Backend: Express.js
Databases: MySQL
Concepts & Architecture: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)
Developer Tools: GitHub

Projects

API Performance & Load Testing Platform *Node.js, React, WebSockets, SQLite, Express* | GitHub

- Engineered a high-throughput load testing engine in Node.js/Express with a custom promise-based concurrency limiter, executing rolling-window concurrent workloads of 100+ requests without blocking the event loop.
- Implemented raw WebSocket (`ws`) bi-directional streaming to broadcast sub-millisecond request timing (`performance.now()`) and live progress updates to a React 19 frontend with zero UI latency.
- Built a statistical analytics engine computing average/min/max, P50/P95/P99 tail latency, throughput (req/s), and error rates, paired with a rule-based engine that automatically flags regressions and tail-latency spikes.
- Designed automated concurrency-scaling tests (1–25+ virtual users) and metric-by-metric run diffing with Recharts visualizations, diagnosing API breaking points and throughput collapses of up to 91%.
- Developed a multi-step chained workflow engine enabling dynamic response variable extraction (e.g., auth tokens) and parameter interpolation across sequential HTTP requests.
- Structured an optimized SQLite schema via `better-sqlite3` for instant local persistence and indexed retrieval of 1,000+ test runs and granular per-request telemetry.

SummarAI – AI-Powered Text Summarization Platform *React 19, FastAPI, Python, SQLite, Hugging Face* | GitHub

- Built a full-stack text summarization app with React 19 and FastAPI, deploying DistilBART transformers to compress multi-page documents by up to 70% while preserving key contextual points.
- Implemented drag-and-drop uploads for PDF, DOCX, and TXT files with 4 summary styles and 3 length options, reducing reading time by roughly 60%.
- Secured endpoints using JWT-based authentication, bcrypt password hashing, and user-isolated SQLite storage for account profiles, history, search, and bookmarks.
- Integrated YAKE keyword extraction with interactive click-to-highlight and automatic key-point detection to enhance document scannability.
- Streamlined user workflows end-to-end with real-time reading-time analytics, compression ratios, and one-click client-side PDF export.
- Optimized SQLite query indexing to ensure sub-50ms query response times across hundreds of historical summarization records.

Education

Vellore Institute of Technology
B.Tech in Computer Science, CGPA: 7.82/10.0 2023 – 2027

Certifications

- Google IT Support Certificate – Google Career Certificates (Jan 2026) | Verify
- The Bits and Bytes of Computer Networking – Google, Coursera (Dec 2025) | Verify
